ANNALI IDROLOGICI

2017

PARTE PRIMA

ANCONA
2017

Indice

Sezione A - TERMOMETRIA **2**
Abbreviazioni e segni convenzionali - Contenuto delle tabelle - Consistenza della rete termometrica 2
Elenco e caratteristiche delle stazioni termometriche 3
Tabella I - Osservazioni termometriche giornaliere 5
Tabella II - Valori medi ed estremi delle temperature 56

Sezione B - PLUVIOMETRIA **68**
Abbreviazioni e segni convenzionali - Terminologia 68
Contenuto delle tabelle - Consistenza della rete pluviometrica 69
Elenco e caratteristiche delle stazioni pluviometriche 70
Tabella I - Osservazioni pluviometriche giornaliere 72
Tabella II - Totali annui e riassunti dei totali mensili delle quantitá delle precipitazioni 101
Tabella III - Precipitazioni di massima intensitá registrate ai pluviografi 105
Tabella IV - Massime precipitazioni dell'anno per periodi di piú giorni consecutivi 108
Tabella V Precipitazione di notevole intensitá e breve durata registrate ai pluviografi 111

Elenco alfabetico delle stazioni termopluviometriche **114**

Sezione A - TERMOMETRIA

Abbreviazioni e segni convenzionali

Termometro in telemisura ..... TA
Dato incerto ..... ?
Dato mancante ..... «
Dato interpolato ..... []

Sono stampati in **grassetto** ed in *corsivo* rispettivamente i valori massimi ed i valori minimi.

CONTENUTO DELLA TABELLA

I dati sono trasmessi da stazioni termopluviometriche automatiche che rilevano la temperatura ogni mezz'ora. I valori massimo e minimo giornalieri sono calcolati nelle 24 ore (riferite all'ora solare) e vengono assegnati al giorno del rilevamento. Le stazioni sono ordinate nelle tabelle secondo la rispettiva posizione idrografica. Le tabelle sono precedute dall'elenco e caratteristiche delle stazioni termometriche che hanno funzionato nell'anno.

TABELLA I. – Sono riportati, per le stazioni che hanno regolarmente funzionato nell'anno, i valori massimi e minimi rilevati giornalmente, e le rispettive medie mensili, unitamente alla temperatura media del mese e dell'anno cui si riferiscono le osservazioni e le corrispondenti medie del periodo.

TABELLA II. – Per le stazioni della tabella I sono riportate:

a) le medie mensili ed annue delle massime e delle minime temperature osservate giornalmente e le medie mensili ed annue delle temperature diurne. Come *temperatura diurna* è assunto il valore della semisomma delle temperature massime e minime osservate in uno stesso giorno;

b) le temperature estreme (massima e minima) osservate in ogni mese e nell'anno, ed il giorno nel quale sono state osservate. Tutte le temperature riportate sono espresse in gradi centigradi e corrispondono alle letture effettivamente eseguite, non essendosi effettuata la riduzione al livello del mare.

Per quanto riguarda le stazioni termometriche in telemisura:

- una stazione termometrica non compare nell'annale se ha registrato meno del 40% dei dati previsti nell'anno in base alla sua frequenza di campionamento.
- Le temperature massime, minime e medie mensili non sono presenti se sono stati registrati meno del 80% dei dati previsti nel mese in base alla frequenza di campionamento.
- Le temperature minime e massime giornaliere non vengono calcolate se sono stati rilevati meno del 92% dei dati nella giornata previsti in base alla frequenza di campionamento.

CONSISTENZA DELLA RETE TERMOMETRICA AL 31 DICEMBRE 2017

Sezione B - PLUVIOMETRIA

Pluviometro in telemisura ..... PP
Dato incerto ..... ?
Dato mancante ..... «
Dato interpolato ..... []

Sono stampati in **grassetto** ed in *corsivo* rispettivamente i valori massimi ed i valori minimi.

TERMINOLOGIA

1. - Altezza di precipitazione (mm): quoziente del volume di acqua raccolta nel pluviometro (compresa, eventualmente, la neve sciolta) per l'area della superficie orizzontale dell'imbuto raccoglitore.

2. - Giorno piovoso: giorno in cui è stata misurata un'altezza di precipitazione uguale o superiore ad un millimetro.

3. - Intensità media di precipitazione, in un dato intervallo di tempo: quoziente dell'altezza di precipitazione nell'intervallo per la durata di questo.

CONTENUTO DELLA TABELLA

Le tabelle sono precedute dall'elenco e caratteristiche delle stazioni di osservazione che hanno funzionato nell'anno. I valori delle precipitazioni riportati sono espressi in millimetri di acqua e comprendono pioggia e neve fusa.

TABELLA I. - Per ogni stazione riporta la quantità di pioggia caduta giornalmente ed il totale mensile ed annuale della precipitazione e del numero dei giorni piovosi. Le misurazioni vengono trasmesse automaticamente ogni 15 minuti e per ogni giorno viene calcolata la cumulata di precipitazione. Il valore segnato rappresenta quindi la quantità di precipitazione caduta nelle 24 ore (riferite all'ora solare) del giorno indicato. Con il carattere **grassetto** è stampato il massimo quantitativo giornaliero misurato per ogni mese. consecutive appartenenti o no allo stesso giorno.

TABELLA II. - Per le stesse stazioni di cui alla tabella I, riporta i totali mensili ed annui delle quantità di precipitazione. Per ciascuna stazione è riportato in **grassetto** il più elevato dei valori mensili ed in *corsivo* il più basso.

TABELLA III. - Per le stazioni dotate di pluviografo, riporta i dati relativi ai valori più elevati delle precipitazioni registrate nell'anno, per 1, 3, 6, 12 e 24 ore

TABELLA IV. - Riporta i massimi valori delle precipitazioni, di tutte le stazioni del Compartimento verificatesi per 1, 2, 3, 4 e 5 giorni consecutivi, appartenenti o no allo stesso mese. Sono considerati solamente i periodi il cui inizio cade entro l'anno anche se eventualmente sono terminati nell'anno successivo Per le durate da 2 a 5 giorni le altezze possono talvolta essere uguali a quelle di durata inferiore; il periodo indicato è sempre quello nel quale si è verificata l'altezza considerata. E ciò per evitare che il massimo di 2 giorni possa risultare inferiore a quello di un giorno e così via..

TABELLA V. - Riporta il valore, la durata e la data delle precipitazioni di maggiore intensità e di breve durata registrate ai pluviografi.

Per quanto riguarda le stazioni pluviometriche in telemisura:

- una stazione pluviometrica non compare nell'annale se ha registrato meno del 50% dei dati previsti nell'anno in base alla sua frequenza di campionamento.
- La cumulata mensile ed il numero di giorni piovosi nel mese non sono presenti se sono stati registrati meno del 95% dei dati previsti nel mese in base alla frequenza di campionamento.
- La cumulata di precipitazione giornaliera non viene calcolata se sono stati rilevati meno del 97% dei dati nella giornata previsti in base alla frequenza di campionamento.
- Per il calcolo della precipitazione annuale é richiesto il 100% dei dati
